

Daehyun Kim

kimdhyungg@gmail.com vimkim.dev github.com/vimkim [LinkedIn](#) [Technical blog](#)

Summary

Software engineer focused on systems programming, database internals, and developer tooling. I build reliable, inspectable software around storage engines, concurrency, Linux workflows, source navigation, CI triage, and AI-assisted development automation. Current technical direction: database systems and low-level engineering in Rust, C, and C++.

Education

Korea University — B.Eng. in Computer Science and Engineering, Minor in Finance, GPA 4.03 / 4.5 2019.03–2023.02

Coursework: operating systems, algorithms, computer architecture, databases, networks. Programming languages coursework included an interpreter, type checker, and garbage collector.

McGill University — B.A. Economics, GPA 3.11 / 4.0 2014.09–2018.06

CS coursework in software systems, computer science, and foundations of programming. Thesis: *Skewness in Individual U.S. Stock Log Returns at Different Investment Horizons*.

Naver Connect Foundation Boostcamp — Web/Mobile 8th cohort 2023.06–2023.12

Team project: [BaekjoonRooms](#).

Selected Work

CUBRID database internals and automation Systems / database tooling

- Maintain public references for source navigation and implementation notes: [CUBRID Doxygen](#), [CUBRID Code Analysis](#), and [CUBRID OOS Project Knowledge Base](#).
- Built CUBRID automation repositories including [cubrid-oos-search](#), [cubrid-test-ai-reporter](#), and [my-cubrid-skills](#) for semantic search, CI/test reporting, JIRA lookup, PR review, and failure analysis workflows.
- Built focused CUBRID utilities: [cubrid-ha-oneclick](#), [cubrid-logtopbind-rs](#), [cubrid-memmondiff](#), [cubrid-circleci-failcases-fetcher](#), and [cubrid-dev2-pr](#).

patchers Rust / terminal UI

- [Terminal-based interactive tool](#) for reviewing and slicing large diff/patch files into smaller, reviewable hunks.
- Designed around keyboard-driven Git workflows for cleaner commits, review preparation, and patch sharing.

Markdown to Jira/Confluence Rust / WebAssembly

- [Browser-based utility](#) for converting Markdown into Jira/Confluence-friendly markup.
- Related tooling includes [md-to-jira-uploader](#) for Jira upload workflows.

Technical Skills

Primary: Rust, C++, C, SQL

Systems: Linux, POSIX, GDB, perf, uftrace, strace, valgrind, make, CMake, Docker

Tooling: Git, GitHub Actions, Bash, zsh, Nushell, Neovim, fzf, ripgrep, jq, direnv, just

Platforms: Arch Linux, Rocky Linux, Ubuntu, Nix, Dev Containers

Familiar: Python, Go, TypeScript, Java, OCaml, Node.js, MySQL, LlamaIndex, ChromaDB

Interests

Database systems, storage engines, MVCC and concurrency, runtime systems, programming languages, developer tooling, AI-assisted software engineering.
